

(b) depleting a nutrient selected from the group consisting of sulfur, iron, and/or manganese from the medium in the presence of DCMU by suspending said culture of cells in the absence of said nutrient and sealing until the culture of cells of algae microorganism from atmospheric oxygen until conditions become anaerobic and sealing the culture from atmospheric oxygen;

(c) measuring the rate of cellular oxidative respiration in  $\text{m mol O}_2 (\text{mol Chl})^{-1} \text{s}^{-1}$  of a sample of cells of said suspended of the algae microorganism from step (b) in the dark until it is constant or about  $13 \text{ m mol O}_2 (\text{mol chl})^{-1} \text{s}^{-1}$  ~~with an  $\text{O}_2$ -electrode;~~

(d) ~~incubating~~ measuring the rate of  $\text{O}_2$  evolution of a sample of the algae microorganism from step (c) in under light of saturating intensity of yellow actinic excitation at about  $1,300 \mu\text{m photons m}^{-2} \text{s}^{-2}$  ~~and measuring the light-saturated rate of  $\text{O}_2$  evolution with an  $\text{O}_2$ -electrode;~~

(e) inducing reversible hydrogenase through photosynthesis by controlling the light saturated rate of oxygen production from the culture of cells of algae microorganism of step (b) so that it is equal to or less than a the constant or  $13 \mu \text{mol O}_2 (\text{mol Chl})^{-1} \text{s}^{-1}$  rate of cellular oxidative respiration using saturating blue actinic excitation at  $250 \mu \text{mol photons m}^{-2} \text{s}^{-1}$  at  $700 \text{ nm}$  ~~rate of cellular oxidative respiration [; and~~

~~(f) collecting]~~ to generate an evolved gas that includes hydrogen.

2. (Previously Amended) The process of claim 1 wherein said hydrogen is generated from water and the accumulated endogenous substrate.

3. (Original) The process of claim 1 wherein depleting is to a concentration of 0.5 millimolar or less.

4. (Original) The process of claim 1 further comprising replacing a head gas with an inert gas.
5. (Original) The process of claim 1 further comprising, after incubating and collecting, repeating the steps of growing to accumulate additional substrate, depleting, sealing and incubating for a plurality of cycles.
6. (Currently Amended) The process of claim 2 wherein the microorganism is selected from the group consisting of a green, red, brown, and blue-green algae.
7. (Original) The process of claim 2 further comprising providing the medium with the depleted nutrient after generating, and repeating the steps of growing, depleting, incubating and generating.
8. (Original) The process of claim 2 wherein the substrate is selected from the group consisting of acetate, carbohydrate, lipid and protein.
9. (Original) The process of claim 4 wherein the inert gas is nitrogen.
10. (Original) The process of claim 6 wherein the algae is *Chlamydomonas reinhardtii*.
